MASTERCLASS.
UNDERSTANDING AND SUPPORTING EMERGENT WRITING.

How does our understanding impact children’s learning?
Introductions

Why did you come to this masterclass?

What do you want to learn about?
Context

• Increased pressure on school teachers created by high stakes testing and community expectations – measurable outcomes
• Risks associated with pushing the school curriculum down into kindergarten and prep to meet these expectations
• Educators’ uncertainty about how to support/teach writing
• Location of children between ages of 4½ and 6 – across preschool and prep
When children start at your school . . . what do they know about writing?

"Clip art licensed from the Clip Art Gallery on DiscoverySchool.com"
What do you think they should know?
Early childhood literacy . . .

“. . . the single best investment for enabling children to develop skills that will likely benefit them for a lifetime.” (Dickinson & Neuman, 2006, p. 1).
‘... prompts a re-imagining of what children bring to early childhood learning contexts and expectations of how and what they will learn.’ (Mackenzie & Petriwskyj, under review)
Contemporary theories . . .

. . . “view literacies as multimodal, complex, culturally embedded human activities which encompass the many codes and symbolic systems humans use for constructing and representing reality and communicating with others.”

(Kennedy, Ridgway, & Surman, 2006, p. 16).

Noella Mackenzie
Success in learning to write . . .

. . . is critical, to success with literacy proficiency generally (Cutler & Graham, 2008), . . . reading achievement specifically (Gerde, Bingham & Wasik, 2012), and . . . accomplishment in school overall (Clay, 2001; Fang & Wang, 2011; Mackenzie, 2009).
Writing . . .

. . . is a means of expressing or communicating in print, which involves the interaction of cognitive and physical factors (Bromley, 2007),

. . . promotes social, emotional and cognitive development (Love, Burns & Buell, 2007).

. . . requires making connections and constructing meaning (Bromley, 2007).
Writing is . . .

“. . . a message-sending, problem solving activity” . . . involving the linking of “invisible patterns of oral language with visible symbols” (Clay, 2005, p. 1).
The writing process . . .

. . . is complex cognitively, socio-culturally, and linguistically;

Writing . . .

. . . entails the interaction of cognitive and physical factors involving the hand, eye, and both sides of the brain (Bromley, 2007).

. . . develops at many levels simultaneously (Tolchinsky, 2006).

. . . is not a natural communicative competence like speech and thus normally requires intentional teaching (Olson 2009).

Reading and Writing are . . .

. . . reciprocal processes.

“oral language is a further rich resource serving both” (Clay, 2005, p. 2).
Young children . . .

. . . begin their writing journey creating meaning by combining multimodal symbolic system or modes such as talking, drawing, singing and role-playing, long before they engage in the mature written linguistic forms of their culture (Kress and Bezemer, 2008).
### Early milestones

| 0-1 | a child notices others writing – this is well before they can tell you they have noticed something (0-1 years). |
Early milestones cont.

1-2 children begin to engage with writing tools – pens, pencils, crayons, electronic devices and possibly mark making tools that are not necessarily designed as writing tools (e.g. Lipstick). (approx 1-2 years).

Noella Mackenzie
Early milestones cont.

1-3 children intentionally engage with writing tools in an exploratory way – this often resembles scribble (approx 1-3 years).
If children . . .

. . .“see an advantage in being able to write, they will apply the same focused attention to learning how to write that they applied to learning to be oral language users.” (Mackenzie, 2010, p. 30).
What are you thinking about now?

Jot down two points and then compare with neighbour
How does school transition impact learning to write?

How can we make it easier?
Help for parents

DRAW

Drawing is fun and helps your child to explore their world. Drawing is an important form of play. Drawing helps children learn to write.

You can support your child by:

- Encouraging them to draw and talk to you about their drawings.
- Providing them with tools for drawing, e.g. paper, pencils, textas, chalk.
- Drawing with them and adding labels to some of their drawings.
- Loading free drawing apps onto your ‘hand held’ computer for them to use.

TALK

Talking about books and reading to your child helps them to develop their language and listening skills.

WHAT CAN YOU DO?

Helping your child become a writer by:

- Reading to them 3 to 5 books every day.
- Taking them places that will fuel their imagination e.g. the park, the playground, the farm, the zoo, the snow, the beach, the local library or the Henry Field Days. Talk to them about the experience.
- Encouraging them to draw and talking to them about their drawings.
- Showing them how you write (with a pen, on the computer, on the phone).
- Teaching them how to write their name and if they are interested, write other people’s names.
- Encouraging them to write and giving them reasons e.g. cards, invitations or recipes.
- Drawing with them.

HELP YOUR CHILD

DRAW

TALK

WRITE
When children start school . . .

. . . usually able to create spoken and visual texts (drawings) but have limited skills in written text creation (writing).

(Mackenzie & Veresov, 2013)
Children’s drawings . . . are an example of *sign creation*, while standard or non-standard uses of conventional print are examples of *sign use*.  
(Vygotsky )
Children’s drawings are important to early writing – however drawing is not always seen as an important means of making meaning.

Consequently children’s early efforts are not always valued and they are not encouraged to draw.
If given the models, opportunity, tools and encouragement, children spontaneously start to add writing to their drawings.
Drawing allows for timely and appropriate intentional input from an adult to assist an already successful meaning maker to learn another way of self-expression.
Drawings act as an anchor for children’s emergent writing, helping them remember ideas as they learn the rules of conventional writing.
Children who are encouraged to **draw, talk, write and share** become confident, flexible writers who create more complex texts than when they are restricted to just writing.

Noella Mackenzie
Children who are encouraged to **draw, talk, write and share** become confident, flexible writers who create more complex texts than when they are restricted to just writing.

**Why?**
If we encourage and value drawing and talking . . .

. . . we can **build a bridge between children’s prior-to-school experiences, current systems of meaning making and the new system of writing.**

Impacting the learner!

N.Mackenzie, CSU, 2014
In this way . . .

. . . “writing becomes a parallel means of meaning making rather than a replacement for the drawing and talking they already do so well when they arrive at school” [or preschool]. (Mackenzie, 2011, p. 338)

Building on what they know and can do.
What do you want to take from this session?

How could this impact learners at your school?

Who do you need to work with to get change at your school?

What should be your first step?
Thank you!
